

Firefox, installing WPS filtering certificate

Click Install Certificate and then choose **Save and click OK**

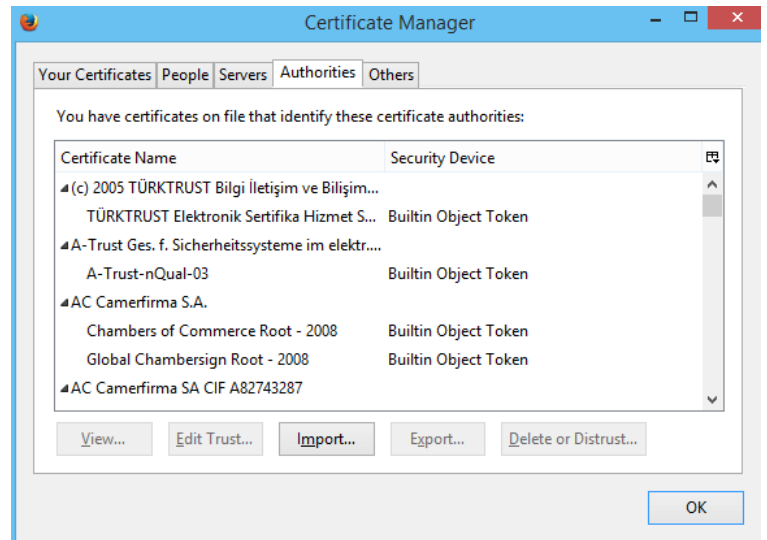

In the top left corner of Firefox (newer versions of Firefox have moved this to the top right corner, the three lines), go to the Firefox menu and choose Options. Go to the Advanced tab, and then click on the Certificates sub tab. Click View Certificates.

Firefox, installing WPS filtering certificate

Make sure you are on the Authorities tab and click Import

Browse to the folder that you downloaded cacert.cer certificate to (likely the Downloads folder or the Desktop folder).

Check off all three Trust boxes and click OK and OK again. SSL websites should now work properly.

You are done.
